

MTRX K1 - Your Solution to Negative Net Absorption

The commercial real-estate market has suffered from the pandemic, especially the commercial office space segment. Employees are demanding a multi-faceted approach to protect their health when they return to the office. The MTRX K1 with its innovative physiology scanning technology and proactive health monitoring is the solution.

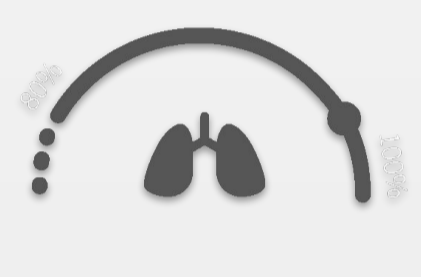

Temperature

Heart Rate

Respiration

The New Standard in Health Evaluation

Simple to Use

Free standing, solid steel construction. Just plug-in the K1 to launch touchless health scanning.

Integrations

Available to use with ID cards or facial recognition for employees (Recognition Mode). "Anonymous Mode" can be used by guests.

Security that Exceeds Temperature Only Screening

The MTRX K1 analyzes and measures heart rhythm, respiration, and temperature. Why all three? **Because temperature alone is not an effective method of detecting infectious diseases like COVID-19, as most COVID cases do not have a fever.** People want to return to their workplace but have concerns that safety precautions are not enforced and not effective. Restore your employee trust with the MTRX K1.

Accurate Real-time Biosurveillance

In Recognition Mode a unique profile is created for each person. The data generated from each scan is analyzed and compared with prior scans to determine if someone is sick. Real-time diagnostic accuracy is accomplished through machine learning (AI) and works synergistically with any existing COVID-19 testing program.
