

MTRX K1 - Confidently Take Control of Your Health

Employee and patient trust is irreplaceable. Protecting the health of your organization, staff, and patients is critical. The MTRX K1 monitors the health of your staff and patients so that they feel safe and confident. The K1 simply accomplishes this by providing revolutionary health scanning technology that integrates seamlessly within any organization.

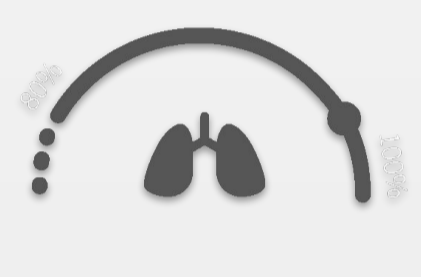

Temperature

Heart Rate

Respiration

The New Standard in Health Evaluation

Simple to Use

Free standing, solid steel construction. Just plug-in the K1 to launch touchless health scanning.

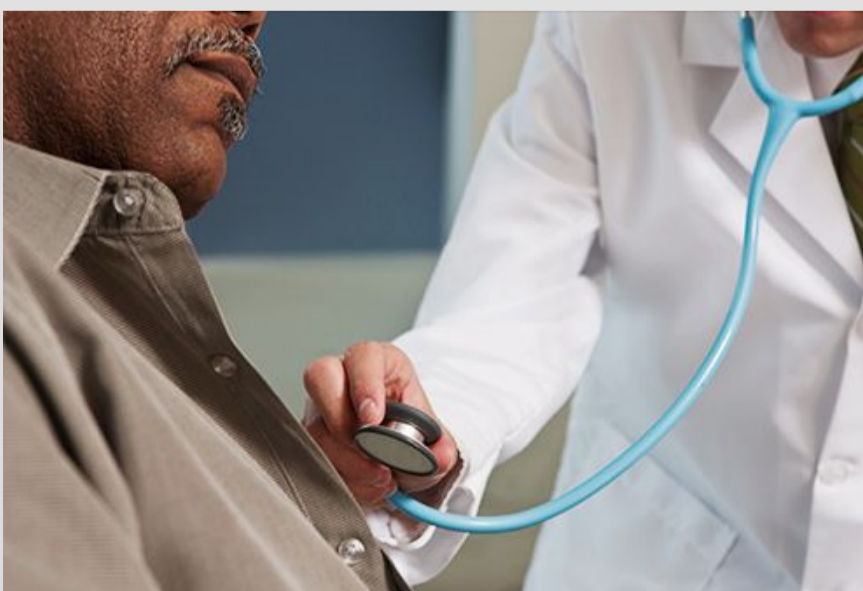

Integrations

Integrates seamlessly with identification cards or QR codes for staff, patients, or visitors.

Biosurveillance that Exceeds Temperature Only Screening

The MTRX K1 analyzes and measures heart rhythm, respiration, and temperature. Why all three? **Because temperature alone is not an effective method of detecting infectious diseases like COVID-19, as most COVID cases do not have a fever.** People want to return to their workplace but have concerns that safety precautions are not enforced and not effective. Restore your employee trust with the MTRX K1.

All purchases of the MTRX K1 are eligible to be reimbursed by the CARES Act!

Automating Vital Signs High Fidelity Data

The MTRX K1 collects 450,000 measurements per second of a person's temperature, heart rhythm, and respiration rhythm. This highly detailed information can be stored in the patient record for analysis or later comparison. This enables your clinical staff to spend more time caring for patients and managing clinical care.
