## MTRX K1 - Leading the Return to Work Initiative Safely

- Scans the Staff and Employees Vital Signs in Seconds
- Provides Early Detection of Underlying Health Issues in Staff
- Early Detection is Critical When Addressing Underlying Health Issues
- Mitigates the Risk of Rampant Spread of Highly Infectious Diseases
- Employees Return to the Office with Confidence Knowing that Everyone Around them is Healthy and Under Active Health Surveillance

- **MTRX is a Service-Disabled Veteran and Minority Owned Business**

Vital Signs: Can identify the existence of an acute medical problem prior to symptoms occurring while rapidly quantifying the magnitude of an illness.
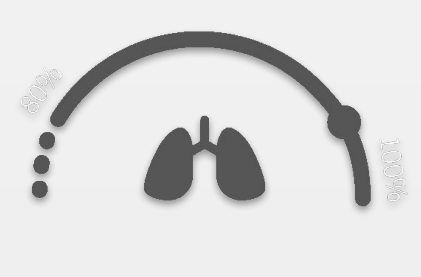

Temperature   Heart Rate   Respiration

The New Standard in Health Evaluation

Simple to Use

Free standing, solid steel construction. Just plug-in the K1 to launch touch free health scanning .

Integrations

Available to use with ID cards or facial recognition for employees or "anonymous" mode for guests.

Biosecurity that is Better than Temperature only Scanning

The MTRX K1 analyzes and measures heart rhythm, respiration, and temperature. Why all three? Because temperature alone is not an effective method of detecting infectious diseases like COVID-19, as the majority of COVID cases do not have a fever.

All purchases of the MTRX K1 are eligible to be reimbursed by the CARES Act!

Accurate Diagnostic Surveillance

"Recognition" mode creates a unique profile for each person and the data generated from each scan is analyzed and compared with prior scans to determine if someone is deviating from their baseline. The real-time diagnostic accuracy is accomplished through machine learning (AI) and works in synergy with any existing COVID testing program.
